

TARIFF DISTRIBUTION

FILE CODE: 680.3400

FILE PACKAGE NO.: MS2004-039

DATE:

April 29, 2004

STATE:

MISSISSIPPI

EFFECTIVE DATE:

04/29/2004

TYPE OF DISTRIBUTION:

Approved

PURPOSE:

This tariff will provide an additional industry standard signaling option for E911 service for the CMRS providers.

A35. INTERCONNECTION OF MOBILE SERVICES

A35.3 Operator Services Interconnection (Cont'd)

A35.3.2 General (Cont'd)

- H. Usage charges for mobile originated calls, as specified in A35.1.6.C. preceding, apply to DACC calls completed over this interconnection. These usage charges apply according to the specifications outlined in A35.1.1.G.1, except that the rating for these mobile originated calls will be based on the screening telephone number in all cases.

A35.3.3 Obligations of the Mobile Service Provider (MSP)

- A. The MSP's switch must be capable of using Operator Services System signaling as described in Bellcore document TR-TSY-000506.
- B. A screening telephone number must be provided by the MSP for Operator Services Interconnection. The chosen telephone number can only then be used in the provisioning of this service. The MSP may use a telephone number from an existing dedicated NXX. However, the MSP must use a telephone number from a dedicated NXX to achieve customer branding.

A35.3.4 Application of Rates

- A. Operator Services Interconnection is comprised of a distance-sensitive facility rate from the MSP's premises to the MSP's serving wire center and a trunk termination rate for terminating equipment located at the TOPS switch. MSP Usage charges will apply for DACC completed calls. Other applicable charges will apply for general operator assisted calls.
- B. Operator Services Interconnection is only available in twenty-four channel increments.
- C. MegaLink® service, MegaLink® Light service and LightGate® service from Section B7. of the Private Line Services Tariff are used to rate the facilities used for Operator Services Interconnection. The terms and conditions which apply for those services apply here, including the application of any service establishment charges.

A35.3.5 Rates and Charges

- A. Facilities
 - 1. The following facility rates apply:
 - a. Rates for digital private line services (MegaLink®, MegaLink® Light or LightGate® services), as provided in Section B7. of the Private Line Services Tariff apply from the MSP's premises to the MSP's serving wire center.
- B. Equipment Termination
 - 1. Trunk Termination, per DS1

| | Nonrecurring Charge | Monthly Rate | USOC |
|-----------------------------------|---------------------|--------------|-------|
| (a) At Company TOPS Tandem Switch | \$90.00 | \$156.75 | OSNET |
| (a) Per Channel | - | 7.50 | OSNCA |

A35.4 Reserved For Future Use

A35.5 Connection of Commercial Mobile Radio Service Providers to E911 Services

A35.5.1 Service Description

- A. This service provides connection between a CMRS *providers* network and the Company's Universal Emergency Number Service - 911 (hereafter referred to as "911 service") network. This service is used by the CMRS *provider* exclusively to route calls from the CMRS's customers trying to access emergency 911 service. *Three* service arrangements are available; (T)
 - 1. The Feature Group D *Interconnection* will allow the *CMRS* provider to pass wireless 911 calls to the BellSouth E911 tandem with voice, P-ANI and call back number (CBN) of the caller for Phase 1 compliance. The BellSouth E911 tandem will pass the data to the ALI hosts for subsequent delivery to the PSAP. This service arrangement requires that the serving E911 tandem(s) be DMS, equipped with the Wireless Interconnection Solution (WLS911). (T)
 - 2. The CAMA Interconnection will allow the *CMRS* provider to pass wireless 911 calls with voice and P-ANI to the BellSouth E911 tandem, for delivery to the PSAP. The CMRS provider will need to establish Non Callpath Associated Signaling (NCAS) links to the ALI hosts to dynamically provide the P-ANI and call back number (CBN) of the caller for each wireless 911 call. These NCAS links described above are not a part of this tariff. (T)

A35. INTERCONNECTION OF MOBILE SERVICES

A35.5 Connection of Commercial Mobile Radio Service Providers to E911 Services (Cont'd)

A35.5.1 Service Description (Con'd)

A. Cont'd

3. The SS7/ISUP Interconnection will allow the CMRS provider to pass wireless 911 calls as described in 1. and 2. preceding, respectively, but allows the use of SS7 supported dedicated trunking (using ISUP signaling as defined in Telcordia GR-2956-Core, CCS/SS7 Generic Requirements in support of E911) instead of CAMA or Feature Group D. If service arrangement 2. preceding is chosen, the CMRS provider will still need to establish Non-Callpath Associated Signaling (NCAS) links to the ALI hosts to dynamically provide the P-ANI and call back number (CBN) of the caller for each wireless 911 call. These NCAS links described above are not a part of this tariff.
